

Variabes aléatoires exponentielles

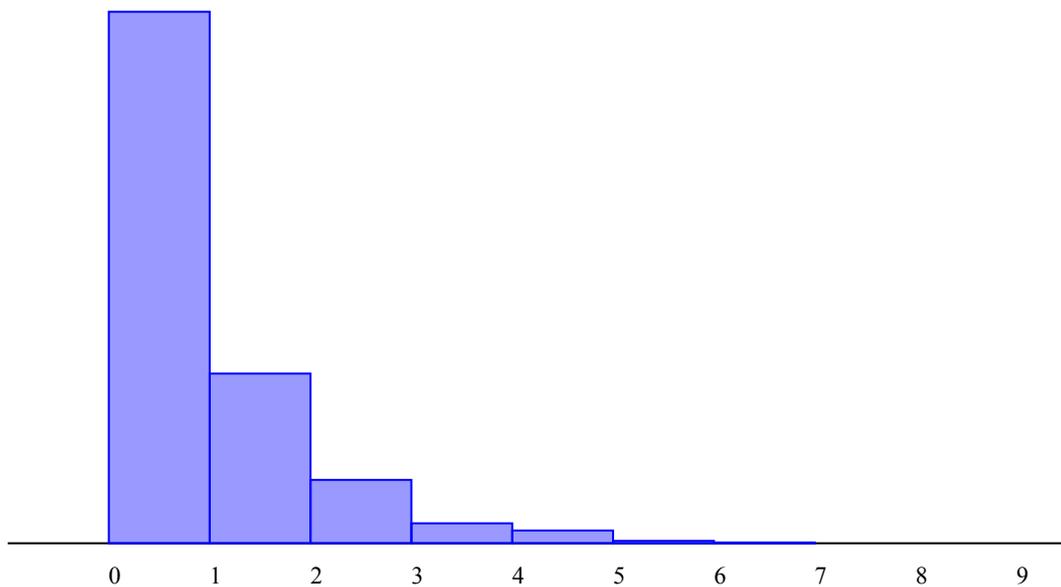

I) Variables exponentielles de paramètre 1

1) Histogramme

On note

```
liste = (-ln(alea())) for n in [1..1000]  
histogramme liste, 0, 10, 10, 1000
```

On obtient

2) Moyenne et écart-type

- Moyenne

On note

```
liste = (-ln(alea())) for n in [1..1000]  
histogramme liste, 0, 10, 10, 1000  
affiche laMoyenneDe liste
```

On obtient 10 fois de suite

0.991538509202726
1.000906537185865
1.0033781040366656
0.9588218354044635
0.9640798983745166

0.9879520469414461
1.001093277740638
0.9418579604551395
0.9688301600264903
0.9926075387656778

- Ecart-type

On note

```
liste = (-ln(alea())) for n in [1..1000])  
histogramme liste, 0, 10, 10, 1000  
affiche laMoyenneDe liste  
affiche lEcartTypeDe liste
```

On obtient 10 fois de suite

0.9290771338844727
1.0274944839225577
1.0735990123461796
0.9951542276936071
0.9305814699441768

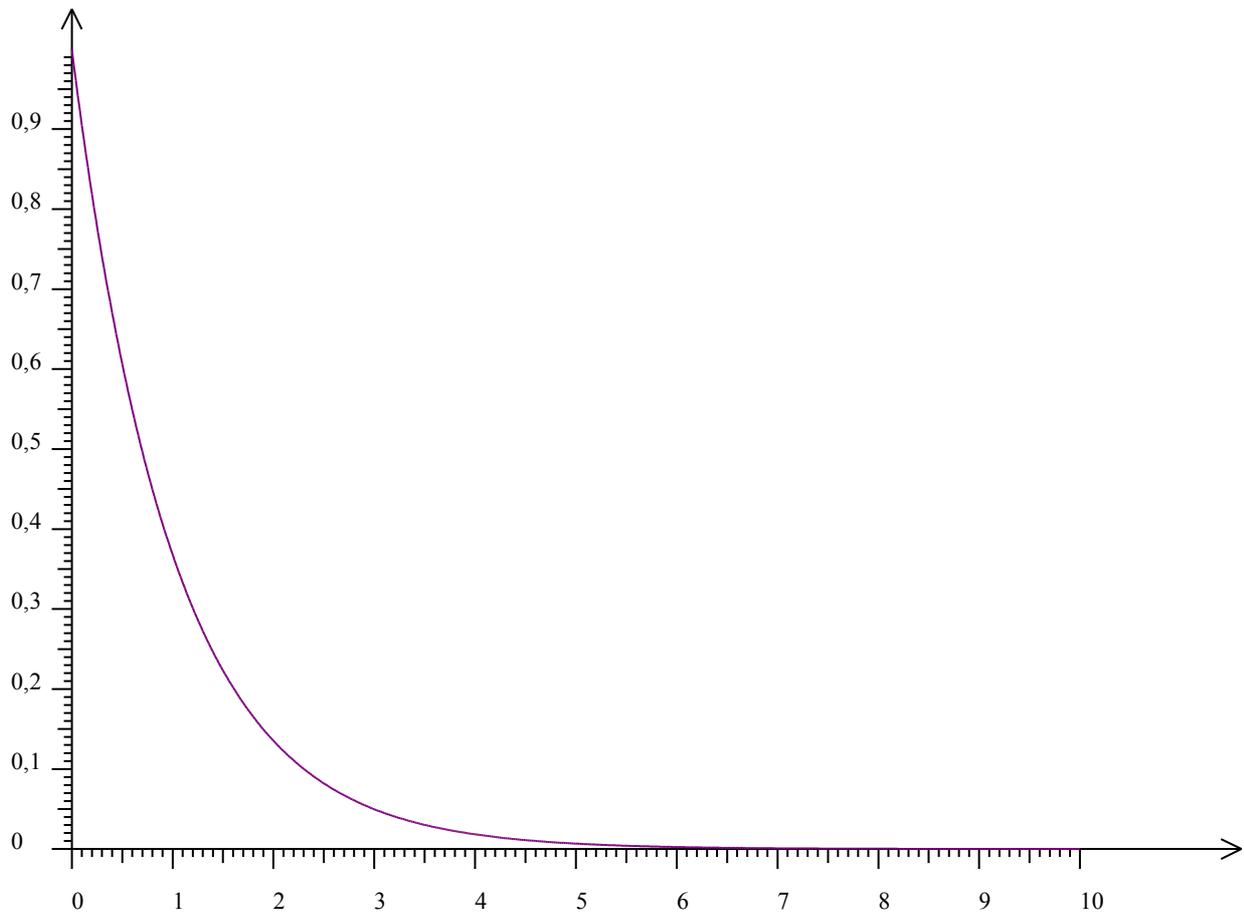

1.1159011938698984
1.1361966358689513
0.9416643178544579
0.9563840727233396
0.9588320662754487

3) Loi

On tape

```
liste = (-ln(alea())) for n in [1..1000])  
histogramme liste, 0, 10, 10, 1000  
affiche laMoyenneDe liste  
affiche lEcartTypeDe liste  
f = (x) -> exp(-x)  
dessineFonction f,0,10,0,1, "purple"
```

On obtient

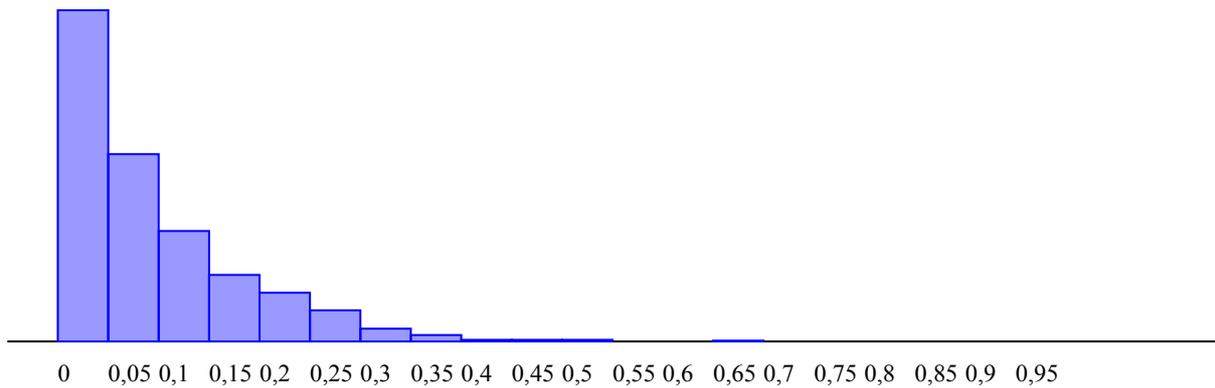

II) Variables exponentielles de paramètre 10

1) Histogramme

On tape

```
liste = (-0.1*ln(alea()) for n in [1..1000])  
histogramme liste, 0, 1, 20, 1000
```

On obtient

2) Moyenne et écart-type

- Moyenne

On tape

```
liste = (-0.1*ln(alea()) for n in [1..1000])  
histogramme liste, 0, 1, 20, 1000  
affiche laMoyenneDe liste
```

On obtient

```
0.10044309389131109  
0.10261607247579939
